DIAPHRAGM SEALS & VALVES

Purchasing a Blacoh dampener? We offer the convenience of adding the right system accessories to your order. Get everything you need from a single source that you know and trust.

Diaphragm Seals

Diaphragm seals, also known as gauge guards, isolate all forms of system instrumentation from hazardous and corrosive process fluids.

Terms & Conditions Apply

Injection Quills

Injection quills are used to provide safe delivery of chemicals into pipelines. The quill end ensures the dispersion of the chemicals away from the pipe wall.

Back Pressure Valves

Back pressure valves enhance performance of pumping systems by applying a continuous back pressure to the pump, while also acting as an anti-syphon valve.

Pressure Relief Valves

Pressure relief valves protect pumping systems from over pressure damage caused by defective equipment or a blockage in the pump system line.

Calibration Columns

Calibration columns or cylinders give accurate calibration of chemical metering pumps and enhance feed systems by verifying the fluid flow rate.

Check & Poppet Valves

Stainless steel check valves ensure chemical fluid only flows in one direction, and act as a positive shutoff to prevent process fluid from going back up the line.
